Subject: Final Cadmium Criteria
[removed.txt](#)

Hi Mike,

I have a question on the final cadmium criteria. It is noteworthy that all of the criterion decreased, *i.e.*, became more stringent, in the final updated criteria from the criteria noticed in the draft update on December 2, 2015. I reviewed the preamble, the final criteria document, and response to comments, and I can't find a clear explanation anywhere for why all of the criterion decreased. Can you explain why and/or point me to where this is explained in the final documents?

December 2015 (Draft):

April 2016 (Final):

Fresh Acute – 2.1

Fresh Acute – 1.8

Fresh Chronic - 0.73

Fresh Chronic - 0.72

E/M Acute – 35

E/M Acute – 33

E/M Chronic – 8.3

E/M Chronic – 7.9

Thanks so much,

Sam
